**Foot Fungus?**

One common type of infection is athlete’s foot which is a fungal infection. The fungus lives in the outer layers of the skin and presents itself in different forms such as:

- Scaly dry rash on the bottom and/or sides of the feet
- Cracks between the toes
- Thick toenails
- Painful open sores
- Blisters

**Call Dr. James LaPolla, Jr. or Dr. Robert Shellito today if you have any symptoms of infection for immediate treatment.**

---

**Infection Under Your Toenail?**

Fungal infection of toenails is a very common health problem. It often goes untreated for many years because people tend to ignore it since they don’t have any pain with it.

**This disease is characterized by:**

- Change in toenail color
- Thickening of the nails
- Foul smell
- Can frequently be accompanied by a secondary bacterial and/or yeast infection in or about the nail plate

**Prevention:**

- A strict regimen of washing
- Make an appointment with Dr. LaPolla or Dr. Shellito

**Diabetic Foot Care**

If you have diabetes or the symptoms of diabetes, you need a Podiatrists' care for regular check-ups and treatments to prevent complications.

**If you have any of the following warnings, call us immediately:**

- Swelling of the foot or ankle
- Pain in the legs
- Open sores on the feet
- Ingrown or fungal toenails

- Bleeding corns
- Calluses
